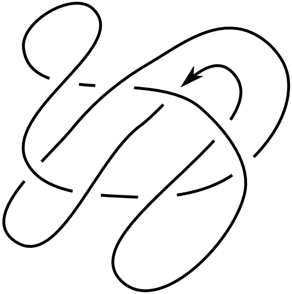
Natural questions about knot diagrams

Question

What fraction of 8-crossing diagrams are trefoils?

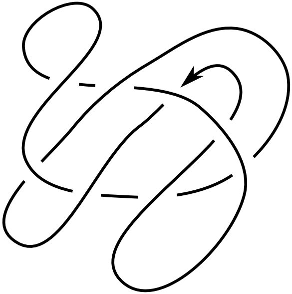


Natural questions about knot diagrams

Question

What fraction of 8-crossing diagrams are trefoils?

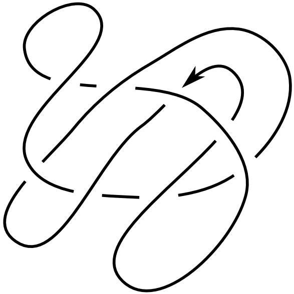
12.48%



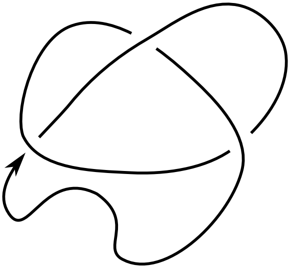
Natural questions about knot diagrams

Question

What is the average minimal crossing $\#$ of an 8-crossing diagram?



$\Rightarrow$

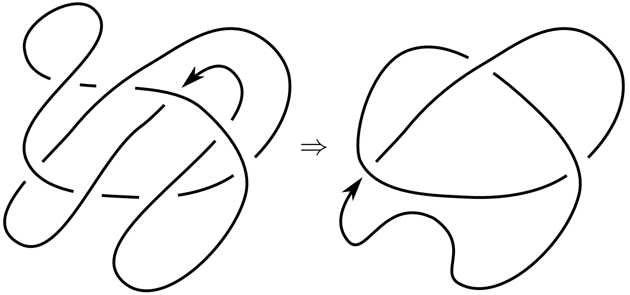


Natural questions about knot diagrams

Question

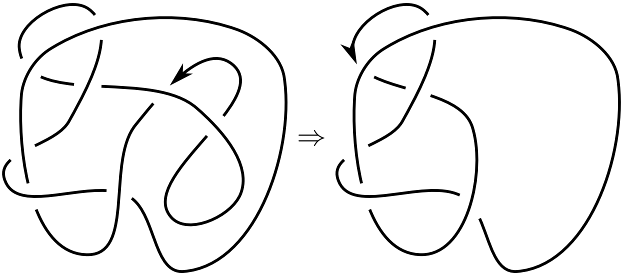
What is the average minimal crossing # of an 8-crossing diagram?

0.52



Natural questions about knot diagrams

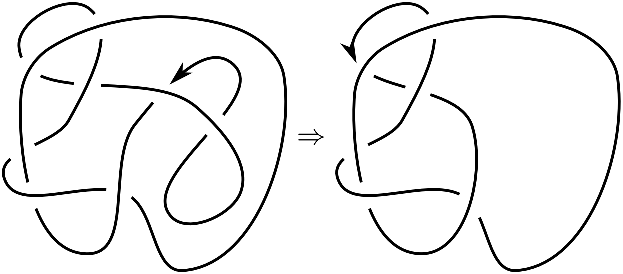
Define an operation on diagrams, **untwisting**: Recursively RI untwist loops in a diagram until there are no more.



Natural questions about knot diagrams

Question

What is the average crossing $\#$ of a untwisted 8-crossing diagram?

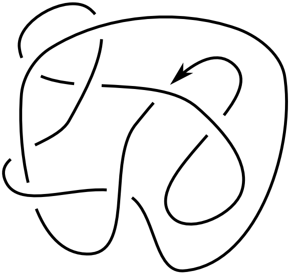


Natural questions about knot diagrams

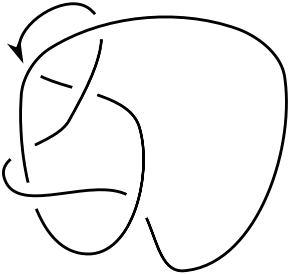
Question

What is the average crossing # of a untwisted 8-crossing diagram?

2.20



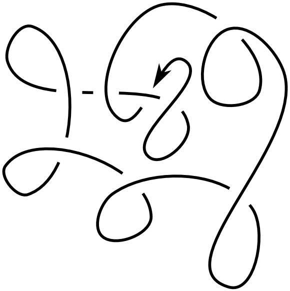
$\Rightarrow$



Natural questions about knot diagrams

Question

How many 8-crossing diagrams can be untwisted to the unknot?



Natural questions about knot diagrams

Question

How many 8-crossing diagrams can be untwisted to the unknot?

42.05%

Random diagrams

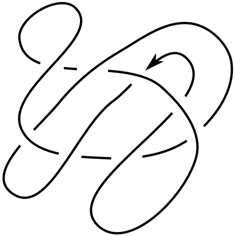
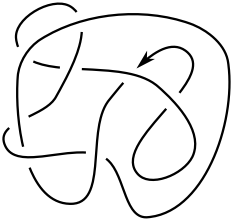
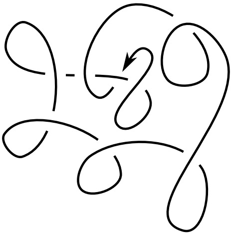
Definition

In the **random diagram model** of random knotting, a n-crossing diagram is drawn uniformly from the finite set of n-crossing knot diagrams.



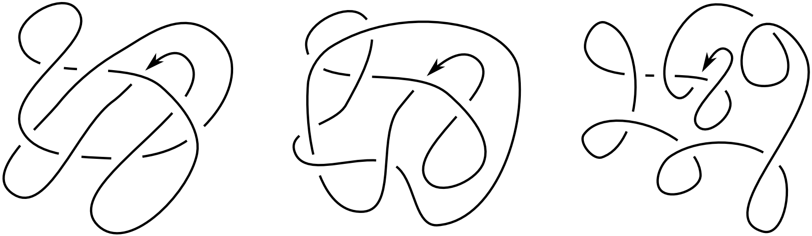




Random diagrams

Definition

A **knot diagram** is a generic embedding of the oriented S^1 into the sphere S^2 together with over-under strand information at each double point up to diffeomorphism of S^2.



How to enumerate knot diagrams

Definition

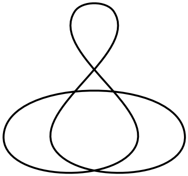
A **knot shadow** is a generic embedding of the unoriented S^1 into the sphere S^2 up to diffeomorphism of S^2.

1. Enumerate shadows
2. Assign crossing and orientation information and identify equivalent diagrams

Tabulating knot shadows

Proposition

Knot shadows $\leftrightarrow$ 1-component 4-valent embedded planar multigraphs up to embedded isomorphism

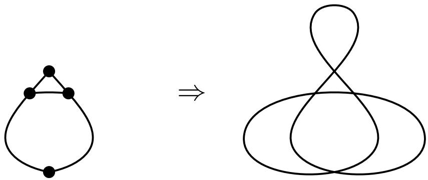


Tabulating knot shadows

Proposition

Knot shadows $\leftrightarrow$ 1-component 4-valent embedded planar multigraphs up to embedded isomorphism

1. Add loops and edges to planar simple graphs

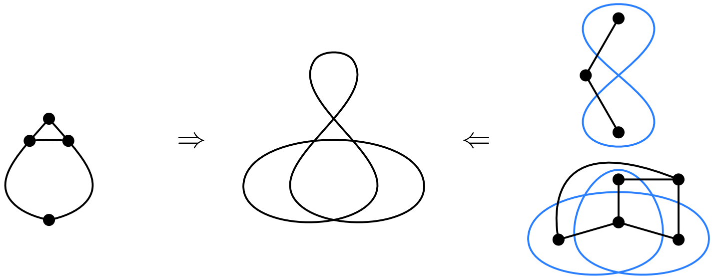


Tabulating knot shadows

Proposition

Knot shadows $\leftrightarrow$ 1-component 4-valent embedded planar multigraphs up to embedded isomorphism

1. Add loops and edges to planar simple graphs
2. Generate multiquadrangulations by connect sum and take dual graphs

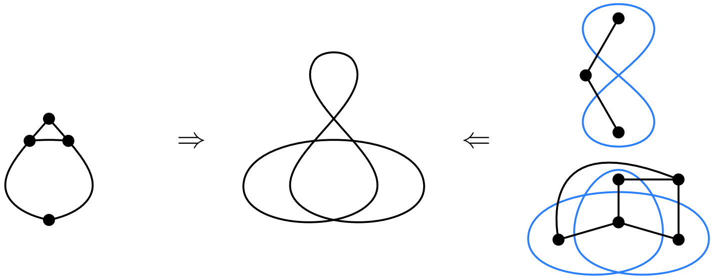


Tabulating knot shadows

Proposition

Knot shadows $\leftrightarrow$ *1-component 4-valent embedded planar multigraphs up to embedded isomorphism*

1. Add loops and edges to planar simple graphs
2. Generate multiquadrangulations by connect sum and take dual graphs



Actually generate all **link shadows**, then restrict to knot shadows

Assign crossings, orientation, identify

1. Orient each component. (2 choices)
2. Assign over-under information to each vertex. (2^n choices)

n	# knot shadows	2^{n+1} (# shadows)	# knot diagrams
3	6	96	36
4	19	608	276
5	76	4,864	2,936
6	376	48,128	35,872

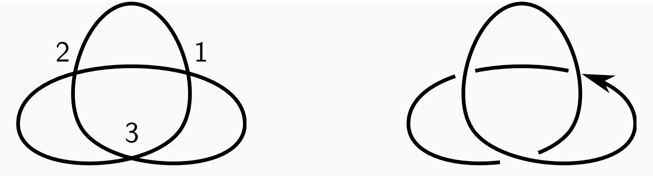
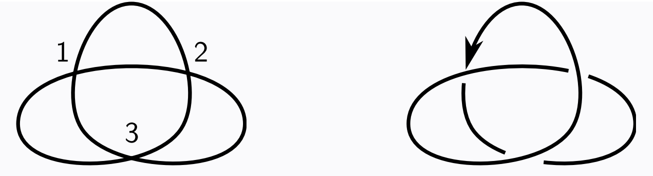
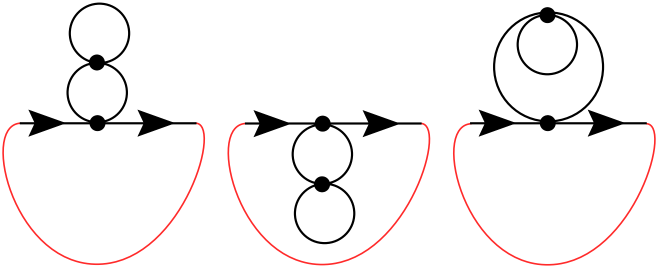
Tabulation is difficult!

Accounting for symmetry is complicated.





Breaking symmetries could make counting easier



Two-leg diagrams counted by generating function (Bouttier, et. al):

$$G_0 = \frac{24g - 1 + \sqrt{1 - 12g}}{9g(1 + \sqrt{1 - 12g})} = 1 + 2g + 9g^2 + 54g^3 + 378g^4 + \cdots$$

A question on unknotting

Theorem ((Frisch-Wassermann-Delbrück Conjecture) Sumners-Whittington 1988)

The ratio of unknots in random n-edge self-avoiding lattice polygons tends to zero exponentially with n.

Conjecture

The ratio of unknots in diagrams tends to zero as n increases. (Exponentially?)

Basic polyhedra 8^* and 9^*

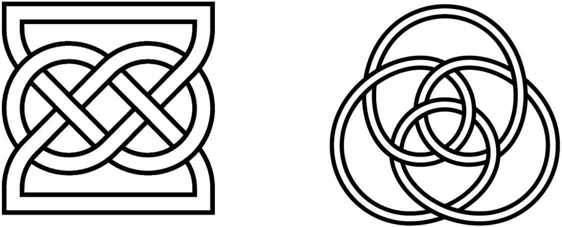

Figure: 8_{18} (left), 9_{40} (right).

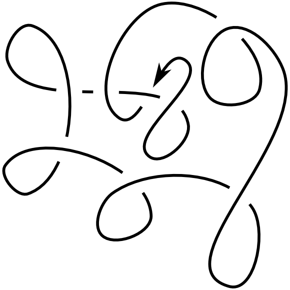
Some shadows are always unknots

A **tree-like curve** is a knot shadow which can be untwisted to the trivial shadow.



Tree-like curves $\Rightarrow$ lower bound on unknottedness.

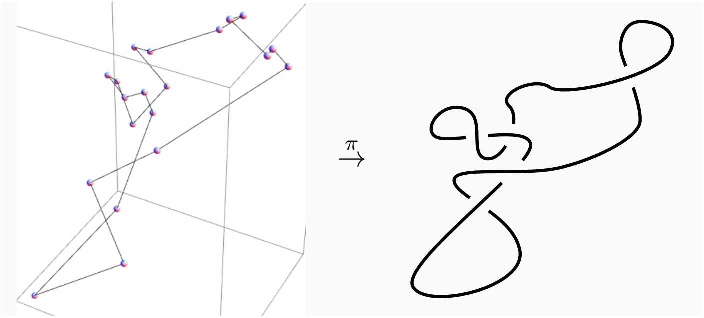
Questions to answer

Random curves project to diagrams.

Question

How does the pushforward measure differ from uniform diagram sampling?

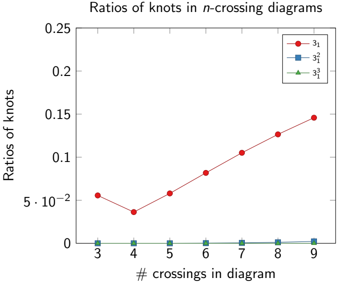


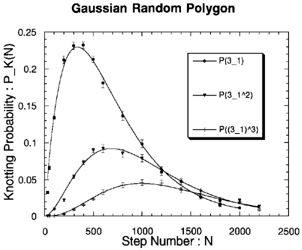
(from Shonkwiler)

Questions to answer

Question

Given n_1, n_2 so that $\mathbb{P}$(an n_1-crossing diagram is unknotted) $=$ $\mathbb{P}$(an n_2-edge random polygon is unknotted). Is there any relation between the probabilities of knots appearing?





(from Deguchi, et. al.)

Questions to answer

Fact

No one will realistically enumerate the 100-crossing knot diagrams.

Question

Can we generate uniformly sampled random 100-crossing knot diagrams **another way**?

Future direction: Link diagrams
